

Product Name: Native Title(Registered) LGATE-004

Description:

This dataset contains the external spatial extent of all Native Title Applications within Western Australia that have been registered with the National Native Title Tribunal (NNTT). This dataset is a spatial depiction of the second stage of the Native Title process. NNTT apply a registration test to all filed/lodged Applications and if the Application passes that test the Application is captured in this dataset. Native Title data can be viewed online via My Landgate, SLIP, WA Atlas and SmartPlan.

Content Purpose:

This dataset is used in the resolution of Native Title issues over the State of Western Australia. It underpins the mapping that is used as evidence in finalizing a Determination of Native Title. It supports land development by identifying an interest in the land that should be considered when dealings are required within a Native Title Application. A registered Application carries certain procedural rights that must be adhered to.

Supplemental Information:

There are areas within an Application that are unable to be claimed under the Native Title Act 1993 (Cwlth). These exclusions will not be spatially depicted unless specifically identified with a parcel identifier (lot number, reserve number etc).
