

Product Name: Native Title (Determination) LGATE-066

Description:

This dataset contains the external spatial extent of all Native Title Applications within Western Australia that have been determined by the Federal Court of Australia. This dataset is a spatial depiction of the last stage of the Native Title process. When a Determination of Native Title over an Application has been handed down from the Federal Court (by litigation or mediation) the Application is captured in this dataset. Native Title data can be viewed online via My Landgate, SLIP, WA Atlas and SmartPlan.

Content Purpose:

This dataset is used for the ongoing management of Native Title issues over the State of Western Australia. It identifies the areas where a Determination of Native Title has been made and acts as a pointer to the full descriptive Determination for rights and interests over the land and water. It supports land development by identifying an interest in the land that should be considered when dealings are required within a Native Title Application.

Supplemental Information:

All exclusions within the Determination will be spatially depicted.
